Email:

chrisseckler@gmail.com

Senior Front-End Engineer with 15+ years of experience building scalable web applications and high-quality user interfaces using React, TypeScript, and modern frontend architecture. Extensive experience designing and scaling design systems and component libraries that improve development velocity, enforce UI consistency, and support long-term product growth.

Delivered measurable product impact across multiple companies, including helping scale products to over 1M users and building frontend platforms serving millions of page views.

Proven track record of translating complex systems and data into intuitive user experiences while collaborating closely with product managers and designers to bring ideas from concept to production.

Currently expanding into AI-driven development workflows through the Newline AI Engineering Bootcamp, gaining hands-on experience with LLM systems, embeddings, prompt engineering, and retrieval-augmented generation (RAG).

TECHNOLOGIES

Frontend

React, TypeScript, Next.js, JavaScript, HTML5, CSS3, Tailwind, Material UI

State & Data

GraphQL, Redux, Zustand, REST APIs

Testing

Vitest, Playwright, Jest

Infrastructure & Tools

Docker, AWS, Google Cloud Platform, Git, Webpack

Product & Analytics

Amplitude, A/B Testing

Other

Node.js, MySQL, PHP, WordPress, Stripe, SendGrid, Segment

EXPERIENCE

Aerospike

09/2024 - 01/2026

Senior Front-End Engineer (Cloud Team)

Worked on Aerospike's Cloud platform, the company's flagship product for managing high-performance distributed databases. Owned the front-end experience for core Cloud workflows, partnering closely with backend and product teams to translate complex infrastructure operations into intuitive, scalable user interfaces.

Key Achievements

- Owned the front-end architecture of Aerospike's Cloud console used by enterprise customers to manage distributed databases.
- Led integration of the ACMS console into the main Cloud platform, enabling successful customer migrations.
- Introduced reusable component patterns and improved testing infrastructure, increasing development velocity and UI reliability.

- Led front-end development for Aerospike's flagship Cloud console, owning the UI for creating, configuring, and migrating distributed databases used by enterprise customers.
- Rebuilt and integrated the ACMS console into the main Cloud console under tight deadlines, enabling customer migrations and accelerating Cloud product adoption.
- Took full ownership of the Cloud UI, eliminating technical debt and introducing reusable component patterns that improved development velocity and long-term maintainability.
- Led and mentored two front-end engineers, raising code quality, delivery consistency, and team autonomy across major feature initiatives.
- Implemented robust unit testing with Vitest and end-to-end testing with Playwright, significantly improving UI reliability and reducing regressions during rapid backend API changes.
- Streamlined cross-team workflows and communication across distributed teams, resulting in faster iteration cycles and smoother feature launches.
- Leveraged AI-assisted development workflows using LLM-powered IDE tooling to accelerate development, explore implementation strategies, and improve engineering productivity.

Adim

05/2023 - 03/2024

Senior Front-End Engineer

At Adim, I spearheaded the development of a design system that refined the developer experience and met precise design needs. My commitment to clear communication and collaboration was key in creating a platform that fosters creative collaboration in the TV and movie industry.

- Led development of a scalable design system using Next.js and TypeScript, establishing reusable component libraries and UI standards that improved development velocity and product consistency across the platform.
- Enhanced Storybook to set rigorous UI standards, boosting the frontend team's ability to develop polished and effective user interfaces.
- Streamlined and refined the Tailwind implementation, ensuring a cohesive and efficient styling framework across the platform.
- Actively engaged in strategic discussions, showcasing a profound understanding of company objectives and contributing to project success.
- Proactively tackled documentation challenges by directly communicating with stakeholders, ensuring smooth project flow and adaptability in a fast-paced startup environment.
- Navigated through team dynamics and communication barriers, delivering frontend components on schedule and fostering a collaborative environment.
- Spearheaded the redesign of the marketing website, enhancing brand presence and user engagement through a modern, intuitive interface and seamless user experience.

Toucan

12/2019 - 03/2023

Senior Software Engineer II

Early engineer (employee #1) at Toucan, helping build a language-learning browser extension and web platform used by over 1 million users.

- Led the architecture of key features including homepage, dashboard, subscription, login/signup on a Next.js website that scaled to over 13 million page views in its lifetime.
- Created design system for uniformity and developer ease, improving team productivity and code quality.
- Developed core features for a browser extension with over one million users: A sidebar, contextless learning moments, games, and launch on mobile Safari, leading to a significant enhancement in user experience and retention.
- Improved site performance by refactoring rendering patterns, optimizing bundle size, and implementing modern performance best practices, increasing Core Web Vitals score from 35 → 98 and enabling SEO-driven growth.
- Spearheaded A/B testing to improve user acquisition and retention, providing data to the product team and driving subscription growth.
- Wrote RFC's to identify technical bottlenecks, leading to increased team knowledge and productivity, and ultimately, better business outcomes.
- Mentored junior engineers and conducted employment interviews, contributing to the growth of the engineering team.
- Technologies used: Next.js, React, TypeScript, Node, GraphQL, Mongo, Material UI, Amplitude, and Jest

Dave.com

03/2018 - 10/2019

Senior Full-stack Engineer

As a senior engineer of Dave's core banking and customer support dashboard, I played an integral role in scaling the startup to a \$1 billion+ unicorn with over 4 million users.

- Developed suite of customer support tools in that enabled quick access to and analysis of bank data.
- Devised a system to pause and unpause user accounts, reducing churn rates and improving retention.
- Wrote automated scripts to customer tickets, reducing response times and improving customer satisfaction.
- Added unit and integration tests to reduce errors.
- Conducted over 50 employment interviews
- Created modular components and screens using React Native, enabling rapid app development and increased customer engagement.
- Technologies used: Typescript, Node, React-Native, React (Redux), MySQL

Chrome River Technologies

12/2015 - 03/2018

Software Engineer - Front End

Implemented modular front-end views using functional JavaScript for a fintech application, collaborating with Product Managers and Back-end Engineers to ensure efficient bug resolution and story implementation within an agile work environment.

- Developed intuitive, scalable views interfacing with REST API endpoints in a large-scale Backbone.js app.
- Identified and solved complex bugs and stories, ensuring the delivery of high-quality software that meets business requirements and improves overall user experience.
- Partnered closely with product managers and designers to translate Figma specifications into scalable, component-driven UI, ensuring pixel-accurate implementation and a consistent user experience across the platform.

AutoMD

11/2014 - 10/2015

Front-End Web Developer

Revamped existing pages and integrated mobile responsive design strategies to enhance user experience and increase engagement on the AutoMD website.

- Collaborated with designers and stakeholders to transform outdated pages into modern, visually appealing designs with intuitive user flows.
- Managed work responsibilities and communicated effectively, ensuring timely project completion and alignment with business goals.
- Leveraged PHP, CSS3, jQuery, and the Smarty templating engine to build dynamic features, leading to an increase in user engagement.

Trailer Park Inc.

11/2010 - 10/2014

Web Developer

Delivered exceptional value by creating engaging websites for prominent entertainment brands. Excelled in collaborative environments of up to 8 team members producing top-quality results.

- Developed interactive websites for large entertainment brands utilizing HTML, CSS, and JavaScript, resulting in improved user engagement and satisfaction while delivering projects on time and within budget.
- Created mobile responsive and HTML5 compliant sites, increasing reach to users across various devices.
- Utilized WordPress, jQuery, and PHP MVC frameworks to create large-scale sites, improving website functionality and performance for clients.

United States Army Reserve

06/2002 - 06/2010

Team Leader - Sergeant

As a leader in the US Army, I oversaw and directed soldiers in a variety of situations in non-combat operations.

- Supervised and delegated tasks to 12 lower enlisted soldiers, resulting in increased productivity and successful mission accomplishment.
- Conducted and oversaw patrols, convoy operations, and traffic control points, ensuring the safety and security of personnel and equipment.
- Deployed in Operation Iraqi Freedom, March 2003 - July 2004.

EDUCATION

Art Institute of California - Orange County

Bachelor of Science, Web Design and Interactive Media

AI ENGINEERING & MODERN DEVELOPMENT

Currently completing the Newline AI Engineering Bootcamp, an advanced program designed for experienced software engineers building production AI systems.

Curriculum includes:

- LLM architecture and inference pipelines
- Prompt engineering and structured output evaluation
- Embeddings and vector similarity search
- Retrieval-Augmented Generation (RAG) systems
- Multimodal AI systems (text, image, audio)
- Building LLM applications using Hugging Face and open-source models

Regularly apply AI-assisted development workflows using LLM-powered IDE tools to accelerate development, explore implementation strategies, and improve engineering productivity.

HuntCalm

A Chrome extension built to solve a problem I ran into firsthand: managing hundreds of LinkedIn recruiter conversations with no way to stay organized. Injects a sidebar directly into LinkedIn with tagging, pinning, notes, and recurring follow-up reminders with native Chrome notifications.

- Tag and filter conversations with custom labels; pin priority threads and attach freeform notes for interview prep or comp details
- Recurring follow-up reminders with flexible cadences (3 days, weekly, monthly, custom) — native Chrome notifications fire when due
- All data persists server-side via Clerk auth and syncs across devices; stats bar shows totals, pinned count, and reminders due at a glance

Stack: React, TypeScript, Vite, Tailwind, Shadow DOM, Node/Express, PostgreSQL, BullMQ, Clerk, npm workspaces monorepo

Still in active development, but a lot of it is already working.

NumPy Dojo

numpydojo.com

Built while completing an AI engineering bootcamp after finding existing NumPy materials too passive to make the syntax stick. A browser-based learning platform that forces you to actually write the code — no Python install required.

- 22 progressive lessons from array creation to linear algebra, each with a built-in code editor and automated validation
- 12 real-world multi-step scenarios teaching when and why to use NumPy across data analysis, finance, image processing, and engineering
- Quizzes with multiple formats, wrong-answer retry loops, and full history — all running via a custom JS engine that mirrors real NumPy syntax

Stack: Next.js, TypeScript, React, Vercel

Exact Recall

exactrecall.com

Built after going to numerous medical appointments and walking out overwhelmed with information I couldn't reliably retain. An AI-powered personal memory app that logs life events through natural conversation and makes them instantly searchable.

- Claude guides users one question at a time, then generates a structured summary with tags, people, location, dates, and a completeness score
- Three search modes: keyword (live SQL), semantic (pgvector + OpenAI embeddings), and AI — Claude reads your events and returns a direct answer with citations
- Incomplete events trigger smart SMS reminders via Twilio (36 hrs, 3 days, weekly); supports file attachments up to 15MB stored in Cloudflare R2

Stack: Next.js, TypeScript, PostgreSQL, pgvector, Clerk, Cloudflare R2, Twilio, Railway, Vercel

Exact Recall is live and actively being developed — the core experience is up and running with more features on the way.

Tag My Web

tagmyweb.com

Built to fix a personal frustration: being subscribed to 500+ YouTube channels with no way to categorize or find

them. Designed and built end-to-end.

- Connects to your YouTube account via Google OAuth and syncs your full subscription list automatically
- Add custom tags to any channel and filter by one or multiple tags with AND/OR logic
- Displays profile images, channel names, and subscriber counts; click any channel to open it directly on YouTube

Stack: Next.js 16, TypeScript, MUI, Turso (SQLite), Google YouTube Data API v3, Vercel
